Enterprise Data Storage

Total points 4

1. **As data evolves during its life cycle**, which of the following factors should ML pipelines address to operate properly?(check all that apply).

   1 / 1 point

   ☑ Account for scalable solutions.

   > ⊘ **Correct**
   > Spot on. Production traffic will vary from day to day and thus your pipeline must scale accordingly.

   ☑ Provide resilient mechanisms for disruptions.

   > ⊘ **Correct**
   > Keep it up!. For example ML pipelines should incorporate resilient mechanisms to deal with inconsistent data.

   ☑ Account for anomaly detection.

   > ⊘ **Correct**
   > Way to go! For example data errors must be handled in the same way as code bugs.

   ☐ Monitor model and data provenance.

   ☐ Use feature engineering.

2. Many modeling problems use identical or similar features, and there is substantial value in enabling teams to share features between their own projects and for teams in different organizations to share features with each other. Which of the following storage solutions is deliberately designed to address these user cases?

1 / 1 point

- [ ] Relational database

- [ ] Data lake

- [ ] Data warehouse

- [x] Feature Store

> ⊘ **Correct**
> Correct! Feast is an example of an open source feature store.

3. Which are the main advantages of using a cloud-based data warehouse ?(check all that apply)

1 / 1 point

- [ ] User owns and controls data governance.

- [x] Provides easy on-demand scalable solution

> ⊘ **Correct**
> Nice going! Cloud solutions are really flexible for scaling up.

- [ ] User needs to handle all maintenance

- [x] They are cost efficient

> ⊘ **Correct**
> Perfect! Otherwise all the software and hardware costs will be handled by your organization.

4. About data lakes it's only true that:

1 / 1 point

- ( ) Handles only processed data

- (•) Can handle both structured and unstructured data.

- ( ) Handles only structured data.

- ( ) Aggregates data from a single source only.

> ⊘ **Correct**
> That's right! Data lakes are really flexible in the type of data they can handle.
